SOFTWARE ENGINEER | DEVOPS ENGINEER | SYSTEMS ENGINEER

PROFESSIONAL SUMMARY

Technical professional with 6+ years of experience supporting Department of Defense and enterprise technology environments. Background combines software development, Linux and Windows systems engineering, automation, cybersecurity, virtualization, cloud technologies, and mission-critical operations. Experienced with Java, Python, C++, PowerShell, Bash, Git, CI/CD, Red Hat Enterprise Linux, VMware, AWS, Ansible, Splunk, and secure infrastructure. Completed all requirements for a Master of Science in Computer Science with a concentration in Computing Systems at Western Governors University.

TECHNICAL SKILLS

Programming: Java, Python, C++, PowerShell, Bash, SQL

Software Development: Object-Oriented Programming, Data Structures, Algorithms, Git, GitHub, GitLab, CI/CD, Django, Debugging, Testing, Version Control

DevOps & Automation: Ansible, PowerShell Automation, Bash Scripting, Git Pipelines, AWS, VMware vSphere

Operating Systems: Red Hat Enterprise Linux 7/8/9, Windows Server, Linux/Unix

Infrastructure: VMware ESXi, vCenter, Active Directory, FreeIPA/IdM, WSUS, Virtual Networking, VLANs

Cybersecurity: DISA STIG, NIST 800-53, Nessus, SCAP, Trellix ePO, Splunk, SIEM, Vulnerability Remediation

Backup & Recovery: Veeam, Backup Exec

Tools & Platforms: Jira, Confluence, Wireshark, Nmap, Microsoft Office

TECHNICAL PROJECTS

C++ Ambulance Dispatch Simulator

- Developed a C++ application that simulates priority-based ambulance dispatch operations.
- Implemented emergency-priority decision logic and travel-time calculations to determine appropriate ambulance assignments.
- Applied object-oriented programming, data structures, modular design, and algorithmic problem-solving techniques.
- Maintained source code and development history using Git version control.

Fortran-to-Java Object-Oriented Translation

- Translated a procedural Fortran weather application into an object-oriented Java implementation.
- Redesigned program components using Java classes, methods, encapsulation, and structured application logic.
- Created testing and validation procedures to verify functional equivalence between the original and translated applications.
- Used GitLab branching, commits, source control, and CI/CD pipelines throughout development.

Python Machine Learning – Hospital Staffing Analysis

- Developed a Python machine-learning application to analyze hospital staffing and productivity data.
- Cleaned and prepared a dataset containing more than 37,000 records for model training and evaluation.
- Implemented a Random Forest regression model using scikit-learn and evaluated performance using MAE, MSE, and RMSE.

- Applied K-Means clustering and feature-importance analysis to identify patterns and relationships within healthcare staffing data.

Django Systems Engineering Portfolio

- Designed and deployed a full-stack Django web application showcasing software engineering and technical projects.
- Implemented authentication, project-management functionality, responsive web design, and static asset management.
- Deployed the application to a cloud-hosted production environment.
- Integrated Git-based source control into the development and deployment workflow.

Linux User Administration Automation

- Developed Bash scripts to automate Linux user creation, deletion, group management, password configuration, and account verification.
- Implemented argument validation, error handling, permissions, and administrative command execution.
- Created reusable shell aliases and environment configurations to improve Linux administration workflows.

Cloud Infrastructure and Monitoring Project

- Designed a cloud-based application environment using AWS services.
- Configured AWS Elastic Beanstalk, S3, IAM, CloudWatch, Cost Explorer, and certificate-management components.
- Implemented monitoring dashboards for performance metrics, application health, and operational costs.
- Applied cloud security, storage lifecycle, access-control, and infrastructure-management concepts.

PROFESSIONAL EXPERIENCE

BAE Systems – 15th Space Surveillance Squadron

Systems Administrator / Telescope Operations Support

Maui, HI | May 2025 – Present

- Support mission-critical telescope, sensor, Linux, Windows, and network systems used for U.S. Space Force space domain awareness operations.
- Administer Red Hat Enterprise Linux and Windows environments supporting continuous operational missions.
- Troubleshoot complex issues involving Linux servers, mission applications, network connectivity, hardware, and supporting infrastructure.
- Develop technical procedures, scripts, and automation solutions that improve system administration and operational reliability.
- Collaborate with engineers, operators, ISSO personnel, cybersecurity teams, and mission stakeholders during system upgrades, configuration changes, incident response, and troubleshooting.
- Deploy security updates, endpoint protection policies, signatures, and configuration changes through Trellix ePolicy Orchestrator.
- Monitor system health, operational status, and security events using Splunk.
- Perform vulnerability remediation and validate system configurations against DISA STIG requirements.
- Support scheduled maintenance, system upgrades, technical investigations, root-cause analysis, and operational validation.
- Assist with continuous monitoring and cybersecurity activities supporting mission-system authorization and operational readiness.

BAE Systems

System Administrator II

Manchester, NH | March 2023 – May 2025

- Administered Red Hat Enterprise Linux and Windows Server environments supporting enterprise operations.

- Managed VMware ESXi and vCenter infrastructure, virtual machines, datastores, networking, and system configurations.
- Automated Linux and Windows administrative activities using Ansible and PowerShell.
- Managed Windows Server Update Services and Linux patch-management processes.
- Performed DISA STIG security hardening and vulnerability remediation across Windows and Linux systems.
- Conducted Nessus vulnerability assessments and reviewed findings to identify and remediate security weaknesses.
- Used Splunk and Trellix ePO for system monitoring, endpoint security, event analysis, and policy enforcement.
- Managed user accounts, permissions, identity services, access controls, and system-security configurations.
- Supported backup, restoration, and disaster-recovery operations using Veeam and Backup Exec.
- Created repeatable technical procedures for system administration, troubleshooting, maintenance, and security operations.

C2Squared Systems

Technical Analyst

Manchester, NH | February 2022 – February 2023

- Provided enterprise systems support, technical troubleshooting, and incident resolution.
- Assisted with infrastructure maintenance, system administration, and operational support activities.
- Investigated hardware, software, account, and network-connectivity issues affecting users and business systems.
- Created technical documentation and participated in on-call support rotations.

United States Air Force

Information Technology Specialist

October 2015 – March 2022

- Supported information technology systems across secure Department of Defense environments.
- Supported NIPR and SIPR network operations, workstation deployments, system upgrades, and technical troubleshooting.
- Managed IT equipment, system assets, user-support requirements, and technology-refresh activities.
- Assisted with cybersecurity compliance, system-security initiatives, and mission-support operations.
- Coordinated technical activities with military personnel and organizations supporting operational requirements.

EDUCATION

Western Governors University

Master of Science, Computer Science – Computing Systems

Degree Requirements Completed July 2026

American Military University

Bachelor of Science, Information Security

Graduated June 2021

CERTIFICATIONS & TECHNICAL TRAINING

- CompTIA Security+
- Splunk Core Certified User
- Red Hat Enterprise Linux System Administration
- Windows Server Administration
- Python Foundations
- Automation with Ansible

AWARDS & RECOGNITION

- Letter of Appreciation – 15th Wing, Pacific Air Forces Commander
- Letter of Appreciation – Department of the Air Force Director, ISR Modernization & Infrastructure
- NAVSUP Recognition – United States Navy
